

ACKNOWLEDGMENTS

This book would not exist in its present form without the help, guidance, suggestions, and encouragement of many friends and colleagues around the world.

My deepest gratitude is to the following people, who not only read and re-read several Chapters carefully and diligently but actually made valuable contributions. They are: Professor *Kanti Datta* of Indian Institute of Technology, Kharagpur, India; Dr. *Vasile Sima* of Research Institute of Informatics, Bucharest, Romania, and two of my former Ph.D. students, *João Carvalho* (now at Universidade Federal de Rio Grande do Sol, Porto Alegre, Brazil), and *Daniil Sarkissian* (now at Mississippi State University). Drs. Carvalho and Sarkissian also wrote the M-files for the MATLAB-based software **MATCONTROL** that accompanies the book.

The following people read certain chapters carefully and thoroughly, pointed out errors, and gave comments and suggestions for improvements: Professors *Thanos Antoulas* of Rice University; *Mark Arnold* of University of Arkansas; *Daniel Boley* of University of Minnesota; *Ralph Byers* of University of Kansas; *Peter Benner* of Technical University of Berlin, Germany; *James Bunch* of University of California; *Raghu Balakrishnan* of Purdue University; *Steve Campbell* of North Carolina State University; *William Ferng* of the Boeing Company; *Roland Freund* of Lucent Technology; *Floyd Hanson* of University of Illinois, Chicago; *Nicholas Higham* of University of Manchester; *Y.P. Hong* of Northern Illinois University; *C. He* Formerly of University of Kansas; *Imad Jaimoukha* of Imperial College of Science; *James Lam* of University of Hong Kong; *Peter Lancaster* of University of Calgary; *W.-W. Lin* of National Tsing Hua University, Taiwan; *Volker Mehrmann* of Technical University of Berlin, Germany; *Vasilios Papakos* of Imperial College of Science, UK; *Daniel Pierce* of the Boeing Company; *Yitshak Ram* of Louisiana State University; *Lothar Reichel* of Kent State University; *Miloud Sadkane* of France; *Ali Sayed* of University of California at Los Angeles; *J.-G. Sun* of Umeå University, Sweden; *Francoise Tisseuer* of University of Manchester, UK; *Andras Varga* of DLR, Germany and *H. Xu* of University of Kansas.

My appreciation goes to Professors *Amit Bhaya* of Federal University of Rio de Janeiro, Brazil; *Shankar Bhattacharyya* of Texas A&M University; and *Rajnikant*

Patel of Concordia University, Canada. They carefully checked the outline of the book for the appropriateness of its contents and made some constructive suggestions.

My other graduate students, *W. Peng*, *C. Qi*, and *C. Hetti*, and *Ruyi Yu* helped me with proofreading of several chapters and writing codes for some MATCONTROL functions.

The present and the past office crew of Mathematical Sciences Department at Northern Illinois University contributed a great deal by typing the many different versions of the book and providing timely and valuable assistance with other aspects of manuscript preparation.

Thank you, *Lisa Allison*, *Elizabeth Buck*, *Joy Zaccaria*, *Liz Mehren*, and *Erika Tavizo*. Liz almost typed the first draft by herself. However, the present version would not exist without the continuous hard work of *Joy and Lisa*. Thanks are also due to *Dr. Eric Behr*, our computer systems manager for his continuous help with several aspects of this book. In particular, the cover design of the book was Eric's idea.

The book would have probably never been completed without the moral support, understanding, and continuous encouragement of my mathematician wife *Karabi*. She would never let me forget that the project had to be finished, no matter how hard it was and how long it took. The other members of my family, who were around me during this project: *Rajarshi*, my son and his wife *Swati*; *Rakhi*, my daughter; *Paula* my niece and her husband *Sidharth*, and *Sudeep*, my nephew; were also very supportive, encouraging, and cheerfully put up with my occasional frustrations.

It is a pleasure to acknowledge the encouragement of my colleagues Professors *Abhijit Gupta* and *Pradip Majumdar* of Northern Illinois University and my friend *Bhaskar Bandyopadhyaya* of Rockford.

Thanks are also due to *Tiffany Gasbarrini* and *Michael Foster* of Elsevier Press for their interests in this project. It was a joy to work with them.

Notwithstanding my sincere efforts to minimize the errors in the book, I am sure quite a few of them will still be there.

I shall remain grateful to any reader kind enough to send his or her comments and suggestions or to point out errors in the book. I can be reached by e-mail: *dattab@math.niu.edu*
